In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vacuum Contactors market for 2018-2023. A vacuum contactor is an electrical device that is used for load breaking through the help of a controlled switch. The switch can make or break an electrical circuit with the help of vacuum interrupter contacts. Vacuum interrupting contacts are encapsulated inside a vacuum bottle, which suppresses the arc when there is a voltage surge or spike. Significant applications of vacuum contactors are in (3-phase or 4-phase AC) motors, transformers, and capacitors usually for surge protection and short-circuit prevention.

Asia-Pacific leads the vacuum contactor market globally with the biggest market share and is expected to grow with a high CAGR among the other regions. This growth is attributed to the growing industrialization and urbanization in the market. There is also a good scope for utilities sector in developed regions like North America and Europe, owing to grid modernization and replacement market for its aging power infrastructure.

Over the next five years, LPI(LP Information) projects that Vacuum Contactors will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
