Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vacuum Pump Brake market for 2018-2023.

Vacuum pump brake is a larger diameter vacuum chamber. There is a pusher (or pistons) mounted with a central diaphragm in the chamber and divide it into two segments. One connects to the atmosphere and the other connected to the engine intake manifold by pipeline. Vacuum pump brake can help shorten the brake distance and decrease the damages to the brake level.

The Vacuum Pump Brake mainly includes mechanical type and electric type. The mechanical type occupies most part of the production. The main production base is located in China, so China is the largest production region in the world.

Currently, almost all automobiles need Vacuum Pump Brake, and the size of the market for passenger cars grew rapidly, and passenger cars has a higher frequency parts replacement, so both in OEM and after-market, the Vacuum Pump Brake used in passenger cars has growth driving factor. So the demand has a stable growth rate. The global sales of Vacuum Pump Brake in 2015 have been over 89166 K Units; the gross margin was 19.54%.

Over the next five years, LPI(LP Information) projects that Vacuum Pump Brake will register a 1.8% CAGR in terms of revenue, reach US\$ 5160 million by 2023, from US\$ 4640 million in 2017.
