Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vaginal Pessary market for 2018-2023.

Pessary is device inserted into the vagina to support sagging organs that have dropped down (prolapsed) or to help control urine leakage.

To treat POP, vaginal mesh is a medical device that is used to provide extra support when repairing weakened or damaged vaginal wall. Surgery can be done through the abdomen (transabdominal) or through the vagina (transvaginal).

The global production volume of vaginal pessary was 9305 K Units in 2016. The two regions are expected to dominate both the production and consumption of vaginal pessary in the years to come. Overall, the vaginal pessary products performance is positive with the global economic recovery.

The technical barriers of vaginal pessary are high, resulting in fewer manufacturing enterprises. For vaginal pessary market, the key players are CooperSurgical, MedGyn and Personal Medical Corp. The market of vaginal Pessary is more separated, with the top four players takes 37.53% of global production market share in 2016.

In the past few years, the price of vaginal pessary has slightly increased and we expect the price will keep increase slightly as the growing of raw material cost.

The application of vaginal pessary can be broadly classified as Stress Urinary

Incontinence, Severe Pelvic Organ Prolapse, and Mild Pelvic Organ Prolapse in terms of function. Mild Pelvic Organ Prolapse is the major application of vaginal pessary which takes consumption share of 75.68% in 2016. Vaginal pessary can also replace surgery in Severe Pelvic Organ Prolapse occasions. Polypropylene mesh (PPM) was never shown to be safe and effective for the treatment of Pelvic Organ Prolapse. Although PPM had been used for decades in the treatment of abdominal hernias, it was dangerous to assume that it would be fine to use in the vagina. Generally, vaginal pessary is the most safe way for Pelvic Organ Prolapse in the current situation.

Over the next five years, LPI(LP Information) projects that Vaginal Pessary will register a 4.8% CAGR in terms of revenue, reach US\$ 270 million by 2023, from US\$ 200 million in 2017.
