The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vanillin market for 2018-2023.

Vanillin is a phenolic aldehyde, which is an organic compound with the molecular formula $C_8H_8O_3$. Its functional groups include aldehyde, hydroxyl, and ether. It is the primary component of the extract of the vanilla bean. Synthetic vanillin, instead of natural vanilla extract, is now more often used as a flavoring agent in foods, beverages, and pharmaceuticals.

Vanillin is an essential aromatic compound extensively used to enhance the aroma and flavor of the different end-use products. Vanilla beans constitute pleasant smell, that occurs naturally in vanilla beans. It is widely used as flavoring agent in food products and aromatic additives for incense, perfumes, medicines, candles, and air fresheners. Due to an ability to enhance flavor in food products coupled with low-calorie content and high availability of antioxidants in vanillin, its demand from food & beverage segment is anticipated to increase over the forecast period.

Food & beverage accounted as the largest end-use segment in 2016 and is anticipated to grow significantly over the upcoming years. Growing demand for variety food products is encouraging manufacturers to produce vanillin products from a sustainable source.

Over the next five years, LPI (LP Information) projects that Vanillin will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
