In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vegetable Parchment market for 2018-2023. Vegetable parchment (paper) is made by passing a waterleaf (an unsized paper like blotters) made of pulp fibers into sulfuric acid. The sulfuric acid hydrolyses and solubilises the main natural organic polymer, cellulose, present in the pulp wood fibers. The paper web is then washed in water, which stops the hydrolysis of the cellulose and causes a kind of cellulose coating to form on the waterleaf. The final paper is dried. This coating is a natural non-porous cement that gives to the vegetable parchment paper its resistance to grease and its semi-translucency. Vegetable parchment is used in textile, food packaging, baking, technical laminates etc.

On the basis of type, the vegetable parchment market is segmented into plain vegetable parchment and siliconized genuine vegetable parchment. The siliconized genuine vegetable parchment segment is expected to account for the larger share of the global market in 2015.
