In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vehicle Used Battery market for 2018-2023. A battery is a rechargeable battery that supplies electric energy to vehicle. This report analyzed the Battery Technology that applied in the Vehicle battery manufacturer. Batteries are classified by chemistry, and the most common are lead, lithium and nickel-based. Lead acid stands its ground as being a robust and economical power source for bulk use and hence is predominant technology for manufacturing storage batteries. Lithium-ion is the battery of choice for Electric Vehicles. Lead acid batteries are the most commonly used type. Large-scale availability of batteries in various sizes and specifications along with high current level is expected to drive the market over the forecast period. Lead acid batteries are relatively cheaper as compared to other batteries and can be manufactured with relatively lower technology equipment, which in turn is projected to keep their demand high through 2025. On the other hand, the lithium-ion batteries segment is expected to post the highest CAGR during the forecast period. Growing sales of vehicles and favorable government initiatives in developing economies such as India, China, Vietnam, and Mexico are likely to provide a fillip to the automotive battery market over the forecast period.

Over the next five years, LPI(LP Information) projects that Vehicle Used Battery will register a 7.8% CAGR in terms of revenue, reach US\$ 81900 million by 2023, from US\$ 52200 million in 2017.
