Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Veneer Sheet market for 2018-2023.

The veneer sheets always remain in the natural order as they emerge such that all parts of the original log are kept together. One by one the slices of veneer carefully enter the dryer, where they are dried evenly within a few minutes. Air temperature of up to 320°F at high velocity is blasted on the surface. The veneer must be dried in such a way that it has at least 8-12% of moisture content. Veneer Sheets are used for many applications. These veneers are laid up in various wood cuts. 20mil or 30mil Paper-Backers are also available at an up-charge.

In consumption market, China and Europe are the mainly consumption regions due to the bigger demand of downstream applications. In 2017, these two regions occupied 41% of the global consumption volume in total.

Over the next five years, LPI(LP Information) projects that Veneer Sheet will register a 1.8% CAGR in terms of revenue, reach US\$ 7130 million by 2023, from US\$ 6410 million in 2017.
