# **Abstracts**

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vertical Axis Wind Turbine market for 2018-2023.

Vertical-axis wind turbines (VAWTs) are a type of wind turbine where the main rotor shaft is set vertically and the main components are located at the base of the turbine. This arrangement allows the generator and gearbox to be located close to the ground, facilitating service and repair. VAWTs do not need to be pointed into the wind, which removes the need for wind-sensing and orientation mechanisms. Vertical axis wind turbines offer several potential advantages over the standard horizontal axis wind turbines which are now in common use worldwide.

The US and Europe are the major suppliers of vertical axis wind turbine and also the major consumption markets. In the US, the large land makes it expansive to connect the remote villages into grid. And there is also massive wind power resource, which drive the development of vertical axis wind turbine industry.

China is another major consumption market. Due to the supportive policies established in recent years, the wind power industry is fast developing. In China, the added capacity of wind turbine is more than 100 megawatts in 2014, while most of them are horizontal axis wind turbines.

Over the next five years, LPI(LP Information) projects that Vertical Axis Wind Turbine will register a 4.4% CAGR in terms of revenue, reach US\$ 16300 million by 2023, from

US\$ 12600 million in 2017.
