Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Vinyl Ester Based Resins market for 2018-2023.

Vinyl Ester Resins, also known as VER, is a resin produced by the esterification of an epoxy resin with an unsaturated monocarboxylic acid. The reaction product is then dissolved in a reactive solvent, such as styrene, to a 35–45 percent content by weight. At present, the global market is dominated by China and North America. China is the world's largest production area. In 2016, China hold 51.26% of the global share of production.

The upstream of Vinyl Ester Resins industry is Bisphenol A, epoxy resin, methacrylic acid, maleic anhydride, styrene and so on. Since raw material are most commodities, and most manufacturers can achieve part of the internal supply of raw materials, although raw material ratio in the manufacturing cost is relatively high, in general, bargaining power of raw material enterprises is weak.

Over the next five years, LPI(LP Information) projects that Vinyl Ester Based Resins will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Vinyl Ester Based Resins market by product type, application, key manufacturers and key regions.
