The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Viscometers market for 2018-2023.

A viscometer is an instrument used to measure the viscosity of a fluid. For liquids with viscosities which vary with flow conditions, an instrument called a rheometer is used. Viscometers only work under one flow condition.

In general, either the fluid remains stationary and an object moves through it, or the object is stationary and the fluid moves to pass it. The drag caused by relative motion of the fluid and a surface is a measure of the viscosity. The flow conditions must have a sufficiently small value of Reynolds number for there to be laminar flow.

Viscometer industry is mainly dependent on the company's research development and sales services, while manufacturing lies in relatively weak position. The reason for this is lack of a strong technological competitiveness, production processes focused on producing parts and assembly-based integration

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties coupled with Viscometer industry. In short supply to market in the past few years, more and more companies enter into viscometer industry. Current demand for viscometer product is relatively low, lack of demand, excess supply. Ordinary viscometer products in the market do not sell well; viscometer's price is lower than past years. The signal of market price change indicates the trend in the viscometer industry, low-end products has excess capacity, and high-end products are in short supply.

In viscometer product demand market there is also a certain space, but basically showing the scarcity of high-end products, low-end products are in excess capacity. There is large market demand for high-end products to seize market share of imports acts, local enterprises export more low-end products overcapacity or molding process of basic Materials.

Over the next five years, LPI(LP Information) projects that Viscometers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
