In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Volumetric Feeder market for 2018-2023. A volumetric feeder is a set-speed device that's dependent on a constant, choke-fed, or flooded infeed of a particulate solid, and it feeds by volume only. Volumetric feeders use an auger or screw conveyor running at a constant speed to discharge powder from a storage hopper at a consistent rate. Frequently, the hopper includes devices to condition the bulk material to ensure an even bulk density by using vibration, agitation, massaging or other means to eliminate air pockets and maintain flow.

Over the next five years, LPI(LP Information) projects that Volumetric Feeder will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
