This report studies the Waste Paper Recycling market. Waste paper recycling is the process of mixing used paper with water and chemicals to break it down. This mixture is then chopped up and heated to break it down further into strands of cellulose called pulp or slurry. It is then strained through screens which remove any glue or plastic that may still be in the mixture. Finally it is cleaned, de-inked, bleached, mixed with water and then it can be made into new recycled paper.
