## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Waste-to-Energy Technologies market for 2018-2023.

Waste-to-Energy (WTE) technology utilizes Municipal Solid Waste (MSW) to create electric and heat energy through various complex conversion methods

WTE technology provides an alternative source of renewable energy in a world with limited or challenged fossil reserves.

MSW is considered a source of renewable energy because it contains a large amount of biological and renewable materials.

WTE (Waste-to-Energy) is the process of generating energy in the form of electricity and/or heat from the primary treatment of waste. WTE is a form of energy recovery. Most WTE processes produce electricity and/or heat directly through combustion, or produce a combustible fuel commodity, such as methane, methanol, ethanol or synthetic fuels.

The classification of Waste-to-Energy Technologies includes Thermal Technologies and Biochemical Reactions. The proportion of Thermal Technologies in 2015 is about 97.3%.

Europe region is the largest supplier of Waste-to-Energy Technologies, with a waste treat share nearly 48.8% in 2015. North America is the second largest supplier of Waste-to-Energy Technologies, enjoying waste treat market share about 20.2% in 2015.

Europe is the largest energy generate place, with energy generate market share nearly 44% in 2015. Following Europe, North America and China are also both the large energy generate place with the energy generate market share of 27.4% and 11.5%. Over the next five years, LPI(LP Information) projects that Waste-to-Energy Technologies will register a 3.4% CAGR in terms of revenue, reach US\$ 12300 million by 2023, from US\$ 10100 million in 2017.
