The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Water and Wastewater Treatment Chemicals market for 2018-2023.

Water treatment technologies are organized into three general areas: physical methods, chemical methods, and energy intensive methods.

Chemical methods of treatment rely upon the chemical interactions of the contaminants we wish to remove from water, and the application of chemicals that either aid in the separation of contaminants from water, or assist in the destruction or neutralization of harmful effects associated with contaminants. Chemical treatment methods are applied both as stand-alone technologies and as an integral part of the treatment process with physical methods.

In this report, we mainly research water and wastewater treatment chemicals including Ph adjusters & softeners, flocculants & coagulants, corrosion inhibitors, scale inhinitors/dispersants, biocides & disinfectants and others.

Water and wastewater treatment chemicals is a valuable resource for managers, scientists, plant operators and others interested in chemical water and wastewater. Currently, there are many kinds of water and wastewater treatment chemical products, including Ph adjusters & softeners, flocculants & coagulants, corrosion inhibitors, scale inhinitors/dispersants, biocides & disinfectants and others. Flocculants & coagulants and corrosion inhibitors are major types. In 2017, global flocculants & coagulants used in water and wastewater treatment amount is 15360.1 K MT, which account for 46.75% of global total water and wastewater treatment chemicals.

Generally, water and wastewater treatment chemicals are used in papermaking waste water treatment, industrial water treatment, drinking water treatment and cooling water

treatment etc. Industrial water treatment is largest application field, followed by papermaking waste water treatment industry.

Over the next five years, LPI(LP Information) projects that Water and Wastewater Treatment Chemicals will register a 3.9% CAGR in terms of revenue, reach US\$ 48 million by 2023, from US\$ 38 million in 2017.
