Water Quality Analyzers are used to test water for chemical and biological agents, and to measure variables such as clarity and rate of movement. These instruments provide a standard tool that can be used to collect information from various water sources. Water quality testing instruments can monitor water temperature, dissolved oxygen, pH, conductivity, nitrogen/phosphorus concentration, turbidity, macroinvertebrates, and levels of pesticides and toxic chemicals.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Water Quality Analyzer industry in short supply on the market in the past few years, more and more companies enter into Water Quality Analyzer industry, the current demand for Water Quality Analyzer product is relatively low, lack of demand, excess supply.
