The USA sales of water soluble fertilizers will increase to 1048 K MT in 2018 from 962.2 K MT in 2013 with average growth rate of 1.72%.

Water soluble fertilizers has several types, which include water-soluble NPK, potassium nitrate, potassium sulphate, ammonium phosphates, calcium nitrate, etc. And each type has different application people and places relatively. With entertainment and fitness effect of water soluble fertilizers, the downstream application industries will need more water soluble fertilizers products. So, water soluble fertilizers have a huge market potential in the future.

The major raw materials for water soluble fertilizers are base fertilizer, potash, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of water soluble fertilizers. The production cost of water soluble fertilizers is also an important factor which could impact the price of water soluble fertilizers.
