In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Welding Helmets market for 2018-2023.

Welding helmets are a type of headgear used while performing welding in order to protect you from harmful radiations emitted during the process; welding helmets also protect your face, neck against the flame and flashes generated during the welding. At present, in developed countries, the Welding Helmet industry is generally at a more advanced level. There are many policy to enforce the industrial manufacturer to provide the protection for welder. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies' manufacturing cost is relatively higher, compared with Chinese companies. The world's large enterprises are mainly concentrated in China. With the development of Chinese Welding Helmet production technology, their share in the international market is increasing, and competitiveness in the international market gradually increases.

China's Welding Helmet industry has developed into a national wide status with certain research and production capacity, industry product mix has gradually improved, currently. China has become a large international production country of Welding Helmet, but the production technology is relatively laggard to produce some low-end product. Most of brand owner produce their product through the OEM or ODM in China. Although the new production lines are increasing, and the high-end product is still relying on import. At currently, there are no relate policy to enforce the Industrial sector to provide face protection for welder, the consumption of Welding Helmet in China are still in the traditional type.

Over the next five years, LPI(LP Information) projects that Welding Helmets will register a 5.3% CAGR in terms of revenue, reach US\$ 890 million by 2023, from US\$ 650 million in 2017.
