Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Wet Blasting Machines market for 2018-2023.

This report studies the Wet Blasting Machines market, Wet Blasting Machines or wetblasting machines are designed to simultaneously blast and degrease components, in a quick and easy dust-free process, which achieves outstanding finishing results on a variety of components.

Robotic blasting technique has been adopted to increase the scope of sand blasting in areas where complex process requirements, part complexity, and quality control needs are not sufficed by standard automation solutions. Increased demand from aerospace, automotive and construction sectors is expected to drive market growth over the forecast period. There has been an increase in the use of sand blasting for creating three-dimensional signage and rendering a handmade and carved look.

Inhalation of silica, which has been traditionally used as an abrasive material in sand blasting machines, causes health hazards such as silicosis and other lung diseases.

This has resulted in the governments of many countries forbidding the use of blast cleaning abrasives containing more than 0.1% free silica, on account of which other abrasive materials such as water, walnut shells, and crushed glass have gained prominence. Shot blasting machines, which involve the use of metallic shots and grits as abrasives, have substituted sand blasting machines in several applications to alleviate the risk of contracting lung diseases, thereby restraining market growth to some extent.

The practice of sand blasting denim to give them a distressed or worn out look was rampant before instances of workers suffering from silicosis owing to inhalation of fine

silica particles came into light. Strict regulations in several countries resulted in this practice being banned; however, it is believed that sand blasting has moved to other countries such as Bangladesh, Pakistan, and Egypt to take advantage of the availability of cheap labor and unstructured regulations.

Over the next five years, LPI(LP Information) projects that Wet Blasting Machines will register a 1.0% CAGR in terms of revenue, reach US\$ 59 million by 2023, from US\$ 55 million in 2017.
