## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Wetsuits market for 2018-2023.

A wetsuit is a special garment, usually made of foamed neoprene, which is worn by surfers, divers, windsurfers, canoeists, and others engaged in water sports, providing thermal insulation, abrasion resistance and buoyancy.

Wetsuits are used for thermal insulation for activities where the user is likely to be immersed in water, or frequently doused with heavy spray, often approaching from near-horizontal directions, where normal wet-weather clothing is unlikely to keep the water out.

The insulation properties depend on bubbles of gas enclosed within the material, which reduce its ability to conduct heat. The bubbles also give the wetsuit a low density, providing buoyancy in water.

Developed countries are the main wetsuit consuming countries.

The United States is the world's largest consumer market. Its sales account for about 40% of the world.

Consumption of Europe mainly concentrated in south of the Mediterranean and the United Kingdom. Its sales account for a quarter of the world.

The Australia with vast coastal resources is the world's third consumer market, accounting for about 20% share of the world.

Generally, the main materials are nylon-neoprene-nylon or spandex-neoprene-spandex, but recently, there are some new materials of plant used in wetsuits industry.

In my opinion, in future, wetsuits industry must be promoted in the high-end direction, and the raw materials will be more flexible and resistant.

Over the next five years, LPI(LP Information) projects that Wetsuits will register a 4.6% CAGR in terms of revenue, reach US\$ 3690 million by 2023, from US\$ 2820 million in 2017.
