In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global White Fused Alumina market for 2018-2023. White Fused Alumina belongs to the group of electro-corundum. It is produced by controlled melting of alumina in an electric arc furnace. White fused alumina (WFA) is raw material characterized with high hardness, yet friable with high purity, chemical stability, a high melting point, and large crystal size.

White Fused Alumina (WFA) is obtained from the fusion of high purity calcined alumina in electric arc furnaces. WFA is raw material characterized with high hardness, yet friable with high purity, chemical stability, a high melting point, and large crystal size. The production of white fused aluminum is mainly concentrated in China. In 2016, China contributed about 41.20% production market share. The decreasing share of China in the year was caused by some WFA' stopped production, due to the environment pollution.

Over the next five years, LPI(LP Information) projects that White Fused Alumina will register a 2.4% CAGR in terms of revenue, reach US\$ 490 million by 2023, from US\$ 430 million in 2017.
