In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Wind Turbine Pitch Systems market for 2018-2023.

A safe and reliable pitch system is critical for the wind turbine's performance and power production.

Wind turbine pitch control system can change incidence of rotor blades in a wind power generation system based on real-time wind speed for the purpose of adjusting output power, achieving higher utilization efficiency of wind power and providing protection for rotor blades. When wind speed is not higher than the rated speed, the blade incidence stay near the angle 0° (highest power point), which is similar to that of a generator with constant pitch, generating an output power that changes along with wind speed.

In the coming years there is a comparative steadily demand for Wind Turbine Pitch Systems in the regions of North America, Europe and China and other regions. If conservative forecast, there is one decline from 2021 for wind energy is one kind of new energy, there are some uncertainty during the processing and the industry depends more on climate, wind must be adequate.

In the past few years from 2012-2016, the global production and consumption has a little fluctuation. The global Wind Turbine Pitch Systems market size in terms of production is projected to grow to 42001 Sets while revenue 1654.69 M USD by 2022.

At the same time, EU and China is remarkable in the global Wind Turbine Pitch Systems industry because of their market share.

In the future, the production and consumption is estimated to continue developing with a steady growth rate. To meet the uncertain situation, some manufacturers will be not so radical in this industry.

Over the next five years, LPI(LP Information) projects that Wind Turbine Pitch Systems will register a 1.6% CAGR in terms of revenue, reach US\$ 1680 million by 2023, from US\$ 1530 million in 2017.
