In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Wireless Mesh Network market for 2018-2023.

A wireless mesh network (WMN) is a communications network made up of radio nodes organized in a mesh topology. It is also a form of wireless ad hoc network. Wireless mesh networks often consist of mesh clients, mesh routers and gateways. The mesh clients are often laptops, cell phones and other wireless devices while the mesh routers forward traffic to and from the gateways which may, but need not, be connected to the Internet. The coverage area of the radio nodes working as a single network is sometimes called a mesh cloud. Access to this mesh cloud is dependent on the radio nodes working in harmony with each other to create a radio network. A mesh network is reliable and offers redundancy. When one node can no longer operate, the rest of the nodes can still communicate with each other, directly or through one or more intermediate nodes. Wireless mesh networks can self-form and self-heal.

In the past few years, as the main raw material price was reduced, with the increasing in production capacity, expected that the Wireless Mesh Network raw material price will be stable in the future. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of Wireless Mesh Network. There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality.

The average price of Wireless Mesh Network will fall further. The product average price

declined in the past few years due to the technology development. Over the next five years, LPI(LP Information) projects that Wireless Mesh Network will register a 7.9% CAGR in terms of revenue, reach US\$ 4070 million by 2023, from US\$ 2580 million in 2017.
