## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Xenon market for 2018-2023.

Xenon is a "noble" or "inert" gas present in the atmosphere to a small extent. Xenon was discovered in 1898, in London, by William Ramsay and Morris Travers. They discovered it in the residue remaining after liquid air had been fractionally distilled. Spectroscopic analysis showed the previously unseen beautiful blue lines that indicated the presence of a new element – xenon.

Travers wrote of their discovery, "krypton yellow appeared very faint, and the green almost absent. Several red lines, three brilliant and equidistant, and several blue lines were seen. Latter! The name comes from the Greek word 'xenos' meaning stranger. Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into this field.

Although sales of Xenon brought a lot of opportunity, the study group recommends the new entrants just having money is not enough without technical advantage and downstream support do not enter into the Xenon field.

Over the next five years, LPI(LP Information) projects that Xenon will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
