In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Zirconium Oxide market for 2018-2023.

Zirconium oxide (also known as zirconia or as zirconic anhydride, ZrO_2) is a toxic white powder that is insoluble in water but soluble in mineral acids. Its most naturally occurring form, with a monoclinic crystalline structure, is the mineral baddeleyite. The dopant stabilized cubic structured zirconia, which is synthesized in various colors, is mainly used as a gemstone and a diamond simulant.

The zirconium oxide industry concentration is relatively high; there are not so many manufacturers in the world. The giant manufactures mainly distribute in American and Europe. American has a long history and unshakable status in this industry, such as Zircoa, has perfect products. As to France, the Imerys has become a global leader. In Japan, it is Showa Denko that leads the technology development. In China, the manufactures focus in Anhui, Fujian and Henan province.

Many companies have several plants, usually close to aimed consumption market. There are international companies set up factories in China too, such as Imerys and Saint-Gobain, who have plants in China. Some companies usually take a joint venture enter into aim market such as some American and Japanese companies.

Company mergers and acquisitions, and inter-companies cooperation have occurred for development and growth. As the downstream consumption usually follows with developed and rapid economic growth areas, the developed areas' company prefers

investing to underdevelopment regions these years.

Over the next five years, LPI(LP Information) projects that Zirconium Oxide will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
