The report requires updating with new data and is sent in 48 hours after order is placed.

3D optical profiler is a kind of profilometer using Non-contact technology. They are typically built on advanced optical microscopes, providing the dual advantages of excellent imaging and no contact with the surface being measured. They use a variety of light sources, usually using high-brightness LEDs, to illuminate the sample and sophisticated cameras to capture the images which are then converted into height information using techniques such as confocal microscopy or interferometry.

North America is the largest market of 3D Optical Profiler based on production revenue. The product is used in Electronic & Semiconductor, Micromechanical Industry, Automotive & Aerospace and Life Science.

We tend to believe that this industry has a bright future, considering the current demand of 3D Optical Profiler. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that 3D Optical Profiler will register a 5.5% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$ 100 million in 2017.
