Abrasive disc is a coated abrasive which bonded fine ore abrasive grains to the base material of uniform thickness. It can machine a uniform surface.

Abrasive discs consist of abrasive grains adhered onto a backing of cloth, fiber, film, paper, non-woven, or other material. These units are then mounted on a sander, grinder or similar tool and used in a variety of sanding, grinding, polishing and surface preparation applications.

China has played a more and more important role in abrasive disc industry in the past years and it will be an important consumer market with a huge development space in future.

As more companies to enter the abrasive disc industry, the market competition will be more intense, this will eliminate some companies to make the market more healthy development.

Over the next five years, LPI(LP Information) projects that Abrasive Disc will register a 1.5% CAGR in terms of revenue, reach US\$ 4590 million by 2023, from US\$ 4210 million in 2017.
