Aerosol container, any package, usually a metal can or plastic bottle, designed to dispense its liquid contents as a mist or foam.

Silica, HDPE, ABS, PEN, steel, and aluminum are key raw materials used for the manufacturing of aerosol container for its application in several end-use activities. Metals are widely used owing to its properties such as durability and high resistance to UV rays. Moreover, it can also be printed, molded, and shaped according to the specification of the consumer; thus, demand is anticipated to witness positive growth in the near future. Europe is one of the largest exporters of aerosol container globally, in terms of volume. Increasing demand for personal care products in developing economies such as Brazil, Thailand, and India is anticipated to have a positive impact on the Europe aerosol container production.
