Air springs are load-carrying rubber components constructed of a hollow rubber bellow sealed to metal plates attached at the top and bottom. Through the use of air compression, air springs dampen shock and vibration.

Globally, the Air Springs industry market is concentrated by Continental, TrelleborgVibracoustic, Bridgestone, etc. as the manufacturing technology of Air Springs is relatively much more mature. Also some enterprises are still well-known for the wonderful performance of their Air Springs and related services. At the same time, some countries such as Germany, Japan and USA are remarkable in the global Air Springs industry because of their market share and technology status of Air Springs. The Sales of Air Springs is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Air Springs industry may not keep that fast. But it is surely forecasted that the market of Air Springs is still promising.

Convolutd and sleeve commercial vehicle air springs perform distinct functions and, in general, cannot be substituted for each other. For instance, an air spring used in a trailer suspension is not the same as an air spring used for a truck seat. Accordingly, the types of vehicle air springs are not interchangeable or substitutable for one another, and demand for each is separate.

Over the next five years, LPI(LP Information) projects that Air Springs will register a 3.4% CAGR in terms of revenue, reach US\$ 2630 million by 2023, from US\$ 2140 million in 2017.
