Alcohol is made by fermenting a natural source of sugar with a catalyst, which is usually yeast. As it ferments, the carbohydrates (starch and sugars) in the main source turn into carbon dioxide and ethyl alcohol, which is the basis for all alcohol drinks.

Rapidly growing consumption and demand for alcoholic beverages drives the growth of alcoholic ingredients market worldwide. In addition, rise in use of alcoholic ingredients across numerous industry applications due to its versatile functionality is expected to escalate its market growth. However, the cost of raw materials and the stringent government regulations pertaining to use of alcoholic ingredient is anticipated to restrain the growth in this market over the forecast period. Moreover, ethanol is considered to be the universal solvent and that replaces preservative and stabilizer additives which increases applications of alcoholic ingredients in pharmaceutical industry. Moreover, rising investments in alcoholic beverages industry are considered to create several opportunities in upcoming years.

Over the next five years, LPI(LP Information) projects that Alcoholic Ingredients will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
