The report requires updating with new data and is sent in 48 hours after order is placed.

Alpha-methylstyrene (AMS) is a product produced in parallel from the phenol reaction which is produced by the partial oxidation of cumene.

Alpha-methylstyrene is an intermediate chemical used in the manufacturing of plasticizers, resins, and in many polymerization production processes.

The AMS industry concentration is relatively high. The quantity of manufacturers is fewer in this industry, and high-end products are mainly from America and Western European countries.

In the world wide, giant manufacturers mainly distribute in America and Europe.

America has a long history and unshakable status in this industry, like Honeywell and Axiall, both have perfect products. As for France, the Novapex has become a global leader. In Germany, it is Novapex that led the technology development. In China, the manufacturers focused in Jiangsu and Jilin provinces. Russia is a large player in this market too.

Many companies have several plants, usually close to raw material bases. There are many producers to devote into benzene industry chain optimization.

Over the next five years, LPI(LP Information) projects that Alpha-methylstyrene (AMS) will register a 0.8% CAGR in terms of revenue, reach US\$ 370 million by 2023, from US\$ 350 million in 2017.
