The report requires updating with new data and is sent in 48 hours after order is placed.

Antimicrobial additives have been used successfully for many years as direct food additives. The literature provides evidence that some of these additives may be effective as indirect food additives incorporated into food packaging materials. Antimicrobial food packaging is directed toward the reduction of surface contamination of processed, prepared foods such as sliced meats and Frankfurter sausages (hot dogs). The use of such packaging materials is not meant to be a substitute for good sanitation practices, but it should enhance the safety of food as an additional hurdle for the growth of pathogenic and/or spoilage microorganisms.

Over the next five years, LPI(LP Information) projects that Antimicrobial Food Packaging Additives will register a 7.0% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
