Arsenic removal refers to the equipment used to remove the arsenic from the water. It is necessary step to clean the drinking water, which can meet the state standards. Arsenic occurs naturally in groundwater, less commonly in surface waters. Arsenic is a known carcinogen, increasing the risk of cancer even at very low concentrations.

Currently, some companies in the world can produce arsenic removal equipment, mainly concentrating in Europe and USA. The main market players are Lenntech, Severn Trent Service, Tonka Water, AdEdge Water Technologies, Layne, etc. In China, Yadong Bio Equipment and Beijing Zhongke are the manufactures.

In consumption market, the growth rate of global consumption is smooth relatively. USA and Europe are still the mainly consumption regions due to the advanced production technology and rapid development of economy.

A wide range of technologies has been developed for the removal of high concentrations of arsenic from water. The most common arsenic removal technologies use precipitative process, adsorptive process, ion exchange process and membrane process. It can be widely used in the water treatment industry. With the development of economy, the water treatment industries will need more arsenic removal equipment. So, arsenic removal industry has a huge market potential in the future.

The major raw material for arsenic removal include aluminum oxide, oxide resin (such as hydrous iron oxide resin etc.), titanium oxide, ferric oxide, ferric hydroxide, zeolite molecular sieve, anion exchange membrane, etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of arsenic removal industry.

Compared with international leading players, Chinese domestic manufacturers still have

certain gap, both in the product performance and market share. As the development of China economic and technology, China will have good products like overseas manufacturers.

Over the next five years, LPI(LP Information) projects that Arsenic Removal will register a 2.2% CAGR in terms of revenue, reach US\$ 630 million by 2023, from US\$ 560 million in 2017.
