The report requires updating with new data and is sent in 48 hours after order is placed.

Autocrane means a lifting device incorporating a cable suspended latticed boom or hydraulic telescopic boom designed to be moved between operating locations by transport over the road.

The most basic type of mobile crane consists of a steel truss or telescopic boom mounted on a mobile platform, which may be wheeled (including "truck" carriers). The boom is hinged at the bottom, and can be raised and lowered by cables or by hydraulic cylinders.

In this report, we mention the autocrane including rough-terrain crane, all-terrain crane and truck crane, do not include crawler crane.

For industry structure analysis, the Autocrane industry is not that concentrated. XCMG, Tadano

Zoomlion, Manitowoc and Liebherr are famous in the industry for the wonderful performance of products and satisfactory service. But the market competition is getting fierce, with growing number of manufacturers entering the market; especially several Chinese manufacturers those have cost advantages.

For price trend analysis, a key variable in the performance of Autocrane producers is components and raw material costs, specifically the speed at which any increase can be passed through to customers.

The global Autocrane revenue is forecasted to recovery. We tend to believe that this industry still has a bright future, considering the current demand of Autocrane driven by urbanization in developing countries. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Autocrane (Auto Crane) will register a 3.9% CAGR in terms of revenue, reach US\$ 7960 million by 2023, from US\$ 6320 million in 2017.
