The report requires updating with new data and is sent in 48 hours after order is placed.

Automotive powertrain also called the power plant, consists of those parts or components that conduct the vehicle's power from the original source of energy to the surface of the road. In most modern vehicles, the powertrain includes the engine, transmission, drive shaft, differentials and what is known as the final drive.

In automotive terms, the powertrain (also frequently called the 'running gear' in this context), combined with the frame of the vehicle, forms the chassis. When the engine and transmission are removed from the powertrain, the remainder is what the automotive industry commonly refers to as the driveline or drivetrain.

Automotive Powertrain is a system of mechanical parts in a vehicle that first produces energy, then converts it in order to propel it, whether it be an automobile, boat or other machinery. The basic Components it may include are:

Engine

Transmission

Drive Shafts

The concentration degree of Automotive Powertrain market is high with the top 5 manufacturers occupied market share over 60%. The major players in this market are
