Automotive Radiator is heat exchangers used for cooling internal combustion engines in automobile.

Internal combustion engines are often cooled by circulating a liquid called engine coolant through the engine block, where it is heated, then through a radiator where it loses heat to the atmosphere, and then returned to the engine. Engine coolant is usually water-based, but may also be oil. It is common to employ a water pump to force the engine coolant to circulate, and also for an axial fan to force air through the radiator.

The Automotive Radiator sales industry is not highly concentrated, there are more than one hundred manufacturers in the world, and high-end products mainly come from Asia. This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdevelopment regions that have a large population and fast economic growth, the need of Automotive Radiator starch will increase.

Over the next five years, LPI(LP Information) projects that Automotive Radiator will register a 1.9% CAGR in terms of revenue, reach US\$ 1270 million by 2023, from US\$ 1140 million in 2017.
