Automotive Relays are electrically operated switches used for automotive applications. Relays are used where it is necessary to control a circuit by a low-power signal (with complete electrical isolation between control and controlled circuits), or where several circuits must be controlled by one signal.

Automotive relays of different sizes are found in every type of land or sea vehicle. They are often used to enable a low amperage circuit to switch a higher amperage circuit on or off. An example would be turning headlights on. Automotive relays also allow items to switch at the same time by using a single output, therefore allowing one to simultaneously open and/or close continuity on multiple items. Average relay demand of per vehicle is about 20.

The automotive relay industry has got a rapid development in the last years, with the fast development of automotive industry after the trough in 2009.

The China total production of auto rely is nearly 1039.59 M units and the total capacity is about 1205.00 M units in 2015.

As a high tech industry, the manufacturing technology of automotive relay is mature but only these international giants can supply the high-end products with excellent performance. There is still a core technical barrier.

Today, the price of automotive relay is lower than past years. The reason for this downward trend of price is the development of technology and the price fluctuations of raw materials. In future, the price would go down continuously and slowly.

Over the next five years, LPI(LP Information) projects that Automotive Relay will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
