Logistics and supply chains for spare parts are different from those of finished products because the market for them is unstable. Many manufacturing companies are facing challenges because of an increase in operational costs and a decline in demand from consumers. Vendors of logistics services should be efficient in the provision of IT, data management, and SCM services. Accurate forecasting of demand takes systematic and proper planning, purchasing, and ordering of logistics operations. Logistics is the framework used to transport spare parts such as machine components, tools, and equipment required for the manufacture of new vehicles and replacement of defective parts. These parts can be transported by road, sea, rail, and air. Spare parts are also known as replacement parts, service parts, and repair parts. Spare parts are stored by vendors to be used when the demand arises for replacement or repair of a product. The demand for spares is characterized by fluctuations and volatility. It is affected by stochastic factors such as the intensity of product use, wear behavior, failure rates, and type of maintenance.

Asia-pacific is the largest market as more than half of automotive are shipped from Asia-Pacific, especially China, Japan and Korea. China has the largest automotive production in 2016 and Japan is also an important automotive manufacturing country. With the fast growing automotive production, Asia-Pacific also enjoys the fastest growth rate.

Europe and North America are also the mature automotive market, most manufacturers may take the third party on the duty of parts supply. Under the economic situation, the development speed of

Europe and North America is relative slow.

Today, with the development of technology, automotive spare parts logistic is more efficient and speedy. In recent years, IOT (Internet of Things) is one of the most popular technologies, and which is also very useful for the logistic industry. Besides, more and more logistic robots are used in the freight and warehouse.

Over the next five years, LPI(LP Information) projects that Automotive Spare Parts Logistics will register a 1.0% CAGR in terms of revenue, reach US\$ 45500 million by 2023, from US\$ 42900 million in 2017.
