Precipitated Barium Sulphate is a type of functional filler, which is widely utilized as a pigment extender in surface coating materials, and in the glass and rubber industries. Barium sulphate is superfine with a low oil absorption threshold, allowing for insulation and the prevention of agglomeration and flocculation, ultimately providing the benefit of improved pigmentation efficiency.

According to our research, the prices of barium sulphate precipitated have no obvious fluctuations in the recent few years. Besides, many enterprises can't achieve high profits. In fact, the competition for the industry is fierce.

In short, barium sulphate precipitated project has great potential in global market, but the current market was mainly occupied by the existing enterprises, under the premise of the future demand growth and technological processes, the new entrants into the barium sulphate precipitated industry business should be able to occupy a certain market share. Therefore, new entrants must develop technical and master internal control, to seize the domestic and foreign markets in the future.

Over the next five years, LPI(LP Information) projects that Barium Sulphate Precipitated will register a 1.6% CAGR in terms of revenue, reach US\$ 390 million by 2023, from US\$ 360 million in 2017.
