Clotrimazole is a white powdered pharmaceutical used for treatment of dermatological and gynaecological fungal infections. Clotrimazole was synthesised in 1969 firstly and its chemical name is 1-[(2-chloro-phenyl)(diphenyl)methyl]-1H-imidazole). Its molecular formula is C<sub>22</sub>H<sub>17</sub>ClN<sub>2</sub> and the molecular weight is 344.8 g/mol. Clotrimazole is an inhibitor of ergosterol biosynthesis. It has many ecotoxicological properties in common with a range of fungicides used in agriculture. Clotrimazole is a broad-spectrum antimycotic agent effective pathogenic dermatophytes, yeasts, Candida, Trichophyton, etc.

China is the largest supplier of clotrimazole, the manufacturers in China have a total capacity of 160 MT. In last years, there are some manufacturers have exist this market due to the environmental policies. China is also a major consumption market with many pharmaceutical companies.

Europe and India are also the major manufacturing bases of clotrimazole. But the manufacturers in these regions generally have a relatively low capacity. Because of the policies about development of APIs in India, the India market will occupy larger share in the market.

The clotrimazole market is relatively stable. But all these manufacturers have low capacity utilization. To maintain the development of clotrimazole industry, manufacturers should develop new technology without environmental issues or find new applications for clotrimazole.
