Cold compression therapy combines two elements of the first aid technique, RICE (Rest, Ice, Compression, Elevation); active pneumatic compression with cryotherapy (also referred to as cold therapy). Cold compression therapy works by distributing alternating pressure (this removes edema and reduces swelling which can be eliminated by the lymphatic system). Also, the improved circulation with the intermittent pressure promotes and accelerates tissue healing and tissue quality. Additionally, the decrease in temperature reduces pain by constricting blood flow to the injury.

North America is projected to be the predominant regional sector accounting for the largest market, about 50% share globally, primarily due to its advanced healthcare infrastructure.

Europe also plays important roles in global cold compression therapy devices market, with market size of 31 million USD in 2016 and will reach 39 million USD in 2022.

Asia Pacific is expected to witness the highest growth rate due to untapped opportunities in this region and high patient cognizance of cold compression therapy, coupled with the rapidly developing healthcare infrastructure in the emerging Asian countries.

The players are increasingly focused on advanced product designing and development. This supports the companies in strengthening their product repertoire and in earning maximum revenue share for long-term growth in this sector. The major players catering to the cold compression therapy devices market are Coolsystems (Game Ready), DJO Global, BREG, Össur, ThermoTek, PowerPlay, Bio Compression Systems, Polar Products, HyperIce and Xiangyu Medical. There are various small and large manufacturers, offering products for cold compression therapy devices, resulting in

intense competition among vendors.

Over the next five years, LPI(LP Information) projects that Cold Compression Devices will register a 4.5% CAGR in terms of revenue, reach US\$ 160 million by 2023, from US\$ 130 million in 2017.
