Dimethyl ether (DME) is a clean energy source and as it generates no sulfur oxide or soot during combustion, its environmental impact is low. Owing to its non-toxicity and easy liquefaction properties, DME is easy to handle and therefore can be used as a domestic-sector fuel (substitute for LPG), transportation fuel (diesel vehicles, fuel cell vehicles), power plant fuel (thermal plants, cogeneration plants, stationary fuel cells), and as a raw material for chemical products. Given the above-described superior properties, if DME were to become widely available in large volumes at a reasonable price, DME could be used as a fuel in a wide variety of fields.

As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and dimethyl ether industry in short supply on the market in the past few years. More and more companies enter into dimethyl ether industry, the current demand for dimethyl ether product is relatively low, so there is lack of demand and excess supply. The China production of dimethyl ether is 3929 K MT in 2015, about 92.97% of the global production. There are about 80 companies manufacturing dimethyl ether in China, Kaiyue is the largest dimethyl ether manufacturer in the world, about 7.5% of the global production in 2015.

Over the next five years, LPI(LP Information) projects that Dimethyl Ether will register a 0.1% CAGR in terms of revenue, reach US\$ 2190 million by 2023, from US\$ 2180 million in 2017.
