Drum brakes work on the same principle as disc brakes: Shoes press against a spinning surface. In this system, that surface is called a drum.

Many cars have drum brakes on the rear wheels and disc brakes on the front. Drum brakes have more parts than disc brakes and are harder to service, but they are less expensive to manufacture, and they easily incorporate an emergency brake mechanism.

China is the largest production country with the production market share 28% in 2015. Because most of the big multinational manufacturers have their plants in China, and there are also many local manufacturers in China.

The main consumption regions are concentrated in the China and Europe and North America. The Drum Brake System industry is related industry of automotive manufacturing. Besides, the drum brake system usually is adjusted to some automobile type, so the production and consumption of drum brake system are influenced by them of automobiles. The developing countries have high growth rate in consumption.

In the future, the Drum Brake System maybe not has a promising future due to the development of disc brake. But if the technology can overcome the disadvantages of drum brake system, like fever malpractice, the drum brake system will get some victory in competition among Brake System.

Over the next five years, LPI(LP Information) projects that Drum Brake System will register a 2.5% CAGR in terms of revenue, reach US\$ 3370 million by 2023, from US\$ 2900 million in 2017.
