The report requires updating with new data and is sent in 48 hours after order is placed.

DSL or digital subscriber line is a family of technologies that provide digital data transmission over the wires of a local telephone network.

1. DSL is available in every region of the world, and ADSL owns the majority of the market though VDSL and ADSL2plus are gaining ground
2. DSL is capable of providing up to 100 Mbp, and supports voice, video and data.
3. The new DSL network is IP-centric
4. There is broad equipment interoperability and there are currently established test specifications for ADSL, ADSL2plus, SHDSL, and soon VDSL2 will join the list
5. Finally, ADSL and home networking are a natural fit as DSL effectively supports multiple applications for multiple uses via each DSL connection.

DSL Chipsets is the chipsets used in the DSL devices.

Compared to 2015, DSL chipsets market decreased sales value by 4.97 percent to 512.89 million USD worldwide in 2016. Overall, the DSL chipsets market performance is negative, keeping the trend of declining.

In the past few years, the main raw material price decreased, and it is expected that the DSL chipsets's raw material price will be slightly lower in the future. Therefore, the cost of DSL chipsets will keep decreasing though the energy, transportation costs, and labor costs improving.

There are companies cutting production capacities and the profit is reduced though the cost decreased. As Cable boasts faster speed than DSL Internet, the DSL chipsets is affected a lot.

Over the next five years, LPI(LP Information) projects that DSL Chipsets will register a -7.4% CAGR in terms of revenue, reach US\$ 310 million by 2023, from US\$ 490 million in 2017.
