An electric bicycle, also known as an e-bike, power bike or booster bike, is a bicycle with an integrated electric motor which can be used for propulsion. Many kinds of e-bikes are available worldwide, from e-bikes that only have a small motor to assist the rider's pedal-power to somewhat more powerful e-bikes which tend closer to moped-style functionality: all, however, retain the ability to be pedalled by the rider and are therefore not electric motorcycles.

First of all, the growth of the global electric bicycles market is caused by various driving factors such as strict government regulations. emergence of eco-friendly vehicles and the increasing fuel prices attract potential customers. Second, due to the rising concerns regarding environmental pollution, many governments across the world have implemented several regulations and policies to reduce vehicle emission during the last few years. Global warming has also created a major threat to the environment and human life. Moreover, the emergence of eco-friendly vehicles has also been played a major role in the increasing sales of e-bike. China dominates the electric bicycle market in terms of revenue currently. and Western Europe and North America are beginning to increase their market share of electric bicycles.

Over the next five years, LPI(LP Information) projects that Electric Bicycles will register a 19.6% CAGR in terms of revenue, reach US\$ 4160 million by 2023, from US\$ 1700 million in 2017.
