Electric Forklift refers to a powered industrial truck used to lift and move materials short distances, which is powered by electricity. Majority of electric forklifts are powered by batteries, which are used as source power to drive the motor driving motor and hydraulic systems to travel and load and unload operations.

Compared with internal combustion forklifts, electric forklifts have advantages such as less pollution, easier to operate and higher energy efficiency. Along with the development of economy and the enhancement of environmental protection consciousness, the industry of electric forklift has experienced a rapid growth. For industry structure analysis, the Electric Forklift industry is concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 62.62% of the revenue market.

Europe occupied 28.76% of the sales market in 2015. It is followed by North America and China, which respectively account for around 24.89% and 17.68% of the global total industry. Japan had a bit smaller sales market than those areas, which took about 16.98% of the global sales volume in 2015.

For price trend analysis, a key variable in the performance of Electric Forklift producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Over the next five years, LPI(LP Information) projects that Electric Forklift will register a 5.4% CAGR in terms of revenue, reach US\$ 19600 million by 2023, from US\$ 14300 million in 2017.
