Electric Propulsion (EP) is a class of space propulsion which makes use of electrical power to accelerate a propellant by different possible electrical and/or magnetic means. An electrically powered spacecraft propulsion system uses electrical energy to change the velocity of a spacecraft. Most of these kinds of spacecraft propulsion systems work by electrically expelling propellant at high speed.

Worldwide, there are a little electric propulsion system manufacturers; and there is growing number of enterprises are entering the market attracted by the market potential. Aerospace Corporation, SITAEL and Bellatrix Aerospace are the top there manufacturers of electric propulsion system in the market currently; they account more than half of the market total production volume of electric propulsion system.

North America and Europe are the largest markets of electric propulsion system currently; but the market of electric propulsion system in Asia-Pacific is forecasted to experience a higher growth speed in the following five years due to the growing downstream demand.

Over the next five years, LPI(LP Information) projects that Electric Propulsion System will register a 24.3% CAGR in terms of revenue, reach US\$ 630 million by 2023, from US\$ 170 million in 2017.
