A Electric forklift (also called lift truck, fork truck, fork hoist, and forklift truck) is a powered industrial truck used to lift and move materials over short distances. The forklift was developed in the early 20th century by various companies, including Clark, which made transmissions, and Yale & Towne Manufacturing, which made hoists. Since World War II, the use and development of the forklift truck have greatly expanded worldwide. Forklifts have become an indispensable piece of equipment in manufacturing and warehousing.

Key driving factors identified in the global forklift truck market include expansion of warehouse space globally, growing e-commerce business across the globe, strong demand for forklift truck replacement in developed markets, and bulk investments in purchase of low-cost forklift trucks in emerging markets. With China currently having a prominent share in the manufacturing sector demand for the automated vehicles in the region is significant and the market is projected to rise at a considerable rate.
