The report requires updating with new data and is sent in 48 hours after order is placed.

Electromechanical relay switch low insertion loss (0.1dB), high isolation (85dB), and it may millisecond speed switching signal. The main advantage of this type of switch is that it can be (50 GHz) in the working frequency range DC ~ millimeter wave, and is not sensitive to electrostatic discharge. In addition, the electromechanical relay switch can handle high power levels (up to several kW peak power) video leakage does not occur. With the increasing in production capacity, expected that the electromechanical switches raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of electromechanical switches.

The average price of electromechanical switches will fall further. The product average price declined in the past few years due to the technology development, the average price will keep this trend in the few future years due to increasing mature manufacturing technology, cost of raw materials, as well as the substitute threat.

Over the next five years, LPI(LP Information) projects that Electromechanical Switch will register a -0.3% CAGR in terms of revenue, reach US\$ 4510 million by 2023, from US\$ 4580 million in 2017.
