The report requires updating with new data and is sent in 48 hours after order is placed.

The electronic total station (TPS) is an electronic/optical instrument used in modern surveying and building construction. The total station is an electronic theodolite (transit) integrated with an electronic distance meter (EDM) to read slope distances from the instrument to a particular point. It is used to measuring distances, heights and angles to provide accurate position data.

SOUTH, FOIF, TJOP and DAD captured the top four Chinese local revenue share spots in the Electronic Total Station market in 2015. South dominated with 53.99 percent revenue share, followed by FOIF with 13.75 percent revenue share and TJOP with 7.06 percent revenue share.

Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into the field. Technology and cost are two major problems.

Over the next five years, LPI(LP Information) projects that Electronic Total Station will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
