The report requires updating with new data and is sent in 48 hours after order is placed.

Heat Pump Water Heaters is a device which uses electricity to move heat from one place to another instead of generating heat directly. Therefore, it can be two to three times more energy efficient than conventional electric resistance water heaters. To move the heat, heat pumps work like a refrigerator in reverse.

The downstream industries of heat pump water heater products are residential, commercial and industrial. In the recent years, with the recovery of global economic, the development of emerging countries and the spurring of individual spending, the consumption increase of heat pump water heater will be obvious. In the foreseeable future, the heat pump water heater products will show an optimistic upward trend. Although sales of heat pump water heater products bring a lot of opportunities, the study group recommends the new entrants who just have money but without technical advantage, raw materials advantage and downstream support, do not enter into the heat pump water heater field hastily.

Over the next five years, LPI(LP Information) projects that Heat Pump Water Heaters will register a 2.9% CAGR in terms of revenue, reach US\$ 1690 million by 2023, from US\$ 1420 million in 2017.
